What is feram? feram is a fast molecular dynamics (MD) simulator for bulk and thin-film ferroelectrics and relaxors. Features and keywords In Physics

feram: MD simulator for bulk and thin-film ferroelectrics

Hydrogen in materials exhibits a wide range of concentration, high mobility, quantum nature, and superior chemical reactivity. All these features of hydrogen originate from its bonding and size flexibilities.

The latest literature survey, however, suggests that the scientific activity in this field has reached its peak, with about 400 refereed publications in 2010–2013 each (), indicating that the science in the field of lead-free piezoceramics has now reached a certain degree of maturity. In detail, research in KNN-based materials and BNT-based materials has saturated, while new developments in ...

This paper reviews the present knowledge on tantalum pentoxide (Ta_2O_5) thin films and their applications in the field of microelectronics and integrated microtechnologies. Different methods used to produce tantalum oxide layers are described, emphasizing elaboration mechanisms and key parameters for each technique.

Niobium, formerly known as columbium, is a chemical element with symbol Nb (formerly Cb) and atomic number 41. Niobium is a strong, light grey, crystalline, and ductile transition metal. Pure Niobium has a hardness similar to that of pure titanium [contradictory], and it has similar ductility to iron. Niobium oxidizes in the earth's atmosphere very slowly, hence its application in jewelry as a ...
