Donald B. Kohn, M.D., studies the biology of blood stem cells, which are located in the bone marrow and have two important properties: they can duplicate themselves and they can create all types of blood cells. Over the course of 30 years of research, Kohn has developed new clinical methods to treat genetic blood diseases using blood stem cells that have been modified to

Human cloning is the creation of a genetically identical copy (or clone) of a human. The term is generally used to refer to artificial human cloning, which is the reproduction of human cells and tissue. It does not refer to the natural conception and delivery of identical twins. The possibility of human cloning has raised controversies. These ethical concerns have prompted fifteen nations to pass ...
