Aortic dissection (AD) occurs when an injury to the innermost layer of the aorta allows blood to flow between the layers of the aortic wall, forcing the layers apart. In most cases, this is associated with a sudden onset of severe chest or back pain, often described as "tearing" in character. Also, vomiting, sweating, and lightheadedness may occur. Other symptoms may result from decreased ...

Since pathologists and anatomists first began examining the heart, they realized that a connection existed between deposits of calcium and disease. When x-rays were discovered, calcium was again recognized as a disease marker. In fact, for most of the 20th century, calcium, because of its density ...

High blood pressure or hypertension is a condition in which pressure in the blood vessels is higher than it should be. Blood pressure is measured as two readings, systolic and diastolic. Normal blood pressure is 120/80. New guidelines state that blood pressure between 120/80 and 129/80 is elevated, and 130/80 is high.

A local anesthetic (LA) is a medication that causes absence of pain sensation. When it is used on specific nerve pathways (local anesthetic nerve block), paralysis (loss of muscle power) also can be achieved. Clinical LAs belong to one of two classes: aminoamide and aminoester local anesthetics. Synthetic LAs are structurally related to cocaine. They differ from cocaine mainly in that they have ...
