Centennial Field*

Cordilleran Section Of The Geological

LOCATION. Portland, Oregon, USA—the City of Roses—is located in the heart of one of the most dynamic geologic environments in the West, having been affected by megathrust earthquakes, giant flood-basalt eruptions, catastrophic glacial floods, continuing fluvial and hillslope processes, and human influences on the landscape.

2019 GSA Cordilleran Section - Geological Society of America

GSA 2019 early registration now open. Take advantage of the best pricing for GSA's 2019 Annual Meeting & Exposition in Phoenix from 22-25 September.

GSA Annual Meeting - Geological Society of America

AIPG will be exhibiting at the following GSA Cordilleran Section Meeting in May. AIPG Headquarters is looking for volunteers to help staff our display booth.

AIPG News...

Mr. Wallace has over 25 years of experience in the fields of geology and engineering geology, working on projects in both northern and southern California as well as Colorado, Utah, Hawaii, and North and South Dakota.

Management Team | Cotton Shires

Introduction Hydrocarbons have been produced in North Dakota for many years. The oldest natural gas, or methane, production was non-commercial production reported from a Dakota Sandstone water-well near Edgeley in 1892 (Anderson and Eastwood, 1968).

North Dakota Geological Survey - Department of Mineral ...

The geology of the Grand Teton area consists of some of the oldest rocks and one of the youngest mountain ranges in North America. The Teton Range, partly located in Grand Teton National Park, started to grow some 9 million years ago. An older feature, Jackson Hole, is a basin that sits aside the range. The 2.5 billion year old metamorphic rocks that make up the east face of the Tetons are ...

Geology of the Grand Teton area - Wikipedia

The geology of the Pacific Northwest includes the composition (including rock, minerals, and soils), structure, physical properties and the processes that shape the Pacific Northwest region of the United States and Canada. The region is part of the Ring of Fire: the subduction of the Pacific and Farallon Plates under the North American Plate is responsible for many of the area's scenic features ...

Home - SEPMStrata

At the start of an interpretation of sequence stratigraphy using well logs one must first identify the predominant of sequence stratigraphic surfaces. The MOST important of these surfaces, and the FIRST that should be identified when using logs, are maximum flooding surfaces (mfs) and transgressive surfaces (TS). These coincide and are correlated with radioactive shales (use of the gamma log ...

Young-earth creationists often claim that the geologic column -- the sequence of rocks that document Earth's ancient history -- is cobbled together from bits and pieces of scanty and unreliable evidence. Nothing could be further from the truth. In fact, the entire geologic column can be observed from top to bottom in several locales, including North Dakota, as this article describes.
