How Do I Learn DSP? What follows is one person's response to the perennial question "How do I learn DSP?" It was written by Dale Grover, with input from folks including Rick Lyons, Randy Yates, and Grant Griffin, though their participation is not an endorsement of every opinion expressed here--they're just good guys. A disclaimer: I am a co-author of one of the books mentioned.

Set this parameter to FFTW to support an arbitrary length input signal. The block restricts generated code with FFTW implementation to host computers capable of running MATLAB ®. Set this parameter to Radix-2 for bit-reversed processing, fixed or floating-point data, or portable C-code generation using the Simulink ® Coder™.

The remainder of this paper is organized as follows. In Sections 2 Underwater acoustic sensor networks: communication architecture, 3 Underwater acoustic sensor networks: design challenges we introduce the communication architecture and design challenges, respectively, of underwater acoustic sensor networks. In Section 4, we investigate the underwater acoustic communication channel and ...

Underwater acoustics is the study of the propagation of sound in water and the interaction of the mechanical waves that constitute sound with the water, its contents and its boundaries. The water may be in the ocean, a lake, a river or a tank. Typical frequencies associated with underwater acoustics are between 10 Hz and 1 MHz. The propagation of sound in the ocean at frequencies lower than 10 ...

In mathematics, a Fourier series (*f* or *f*(ω , ω)) is a periodic function composed of harmonically related sinusoids, combined by a weighted summation. With appropriate weights, one cycle (or period) of the summation can be made to approximate an arbitrary function in that interval (or the entire function if it too is periodic). As such, the summation is a synthesis of another function.
