

## *Non Linear Wave Propagation*

### **Non Linear Wave Propagation**

The wave equation is an important second-order linear partial differential equation for the description of waves—as they occur in classical physics—such as mechanical waves (e.g. water waves, sound waves and seismic waves) or light waves. It arises in fields like acoustics, electromagnetics, and fluid dynamics.. Historically, the problem of a vibrating string such as that of a musical ...

Mathematical Description Single waves. A wave can be described just like a field, namely as a function  $(,)$  where  $r$  is a position and  $t$  is a time.. The value of  $r$  is a point of space, specifically in the region where the wave is defined. In mathematical terms, it is usually a vector in the Cartesian three-dimensional space.However, in many cases one can ignore one or two dimensions, and let  $r$  be a point ...

Antenna Toolbox™ provides functions and apps for the design, analysis, and visualization of antenna elements and arrays. You can design standalone antennas and build arrays of antennas using either predefined elements with parameterized geometry or arbitrary planar elements.

### **Antenna Toolbox - MATLAB**

Synthesizing space-time (ST) wave packets and measuring their group velocity. A pulsed plane wave is split into two paths: in one path the ST wave packet is synthesized using a two-dimensional ...
