The Canals Of Mars

Martian canal. These were a network of long straight lines in the equatorial regions from 60° north to 60° south latitude on the planet Mars observed by astronomers using early low-resolution telescopes without photography. They were first described by the Italian astronomer Giovanni Schiaparelli during the opposition of 1877,...

From this some concluded that the Martian canals were an optical illusion, the result of the psychological tendency to connect indistinct features into a comprehensible whole. Confirming this idea was the fact that on those few occasions when the view of Mars was exceptionally clear, the canals couldn't be seen.

Tracing the Canals of Mars: An Astronomer's Obsession. Lowell was not the first to believe he saw vast canals on Mars. That distinction belongs to the Italian astronomer Giovanni Schiaparelli, who in 1877 reported the appearance of certain long, thin lines he called canali, meaning channels in Italian.

The Canals of Mars. But the "canals" of Mars were the creation of Earthlings suffering from a delusion sparked by a mistranslation, beautiful maps, and mutually-reinforcing wishful thinking. The story begins with the Italian astronomer Giovanni Schiaparelli, who called the network of dark areas he saw on Mars through a telescope in 1877 canali,...

The canals of Mars, 1962. A little digging shows why. The map, known as the MEC-1 prototype, was prepared to assist with the upcoming Mariner missions to Mars. E. C. Slipher, late director of the Lowell Observatory (a major centre for planetary research), helped make it. Slipher had got his start under Lowell himself in the late 1900s,...

Canals of Mars. Canals of Mars, apparent systems of long, straight linear markings on the surface of Mars that are now known to be illusions caused by the chance alignment of craters and other natural surface features seen in telescopes near the limit of resolution. They were the subject of much controversy in the late 19th...

The scientific advances and odd misunderstandings that convinced many that Mars was full of canals built by an advanced civilization. A wealthy man, Lowell decided to build his own observatory for the specific purpose of studying Mars's canals in Flagstaff, Arizona, where visibility was clearest.

A Short History of Martian Canals and Mars Fever

These nonexistent canals had real staying power. As mentioned earlier, the Mariner orbiter, in 1964, proved that there were no canals on Mars, but I examined a 1969 map in the Lowell archives that still showed the canals, in all their impossible rectilinear glory. The ruler-straight lines of the canals were relatively faint, as if the planetary ...

When we thought Mars may have channels or canals. Giovanni Schiaparelli, who in his observations of Mars in 1877, called a dense network of linear structures on Mars "canali," meaning "channels" which was mistranslated as "canals" in English. For present investigation of water and ice on Mars, see the Mars - Water & Ice board. The Mars - Terraforming board may be of interest as well.

Community Reviews. Li The Canals of Mars is written from a first-person narrator point of view, which at times makes me feel like I'm missing out on some of the story. There can't be much of "John Doe has brown hair, brown eyes and a muscular build" then; which isn't such a problem in this short story because the main theme is physical beauty.
